
Playing Controllers on Desmume : r/linux_gaming

Try using the a Wii U or Wii U Pro controller with the Desmume program. It's one of the games that work best with the Desmume. You can start your emulation and then when it's ready press the play button on the controller, and then let it go!

Virtual Joystick

How to play a game with a Virtual joystick on Xbox 360.

Xbox 360 virtual joystick driver for windows.

This article explains how to use a virtual joystick in Desmume. Go to the compatibility tab in the options Select the controller and click on the Set Up button Go to the Configuration tab Click on Analog stick, then select Use Analog stick button To play a game, press the A button on the controller, and let go when it says Connected There is another way to use a virtual joystick.

1. In the setup menu, click on "input" then select the joystick device.
2. Click on the option "configuration"
3. Click on "use analog stick"
4. Click on "press A button" and connect the controller. You can also press the START button on the controller. Test your controller, make sure the lights on the controllers are blinking properly and everything is working correctly. If so, click ok.
5. If it says "Unable to connect" try reconnecting the controller and try again.
6. If it says "playback error, press A to retry" try pressing A and removing and connecting the controller.
7. If it says "playback error, press A to retry" try removing the controller for the next run.
8. If it says "Unable to connect" and you followed step 6, try using "use exclusive button" or "use analog stick".
9. If it says "Unable to connect" and you followed step 7, try removing the controller and looking for the specific layout file that the game requires. To look for the layout, in the setup menu, click on "input" then select the layout file.

A: As stated before, the controller will work only if it is plugged in and working.

1. If your controller is not plugged, go to the configuration tab, and then choose "Use analog stick button" as type of configuration.
2. If the controller is plugged, go to

the "Input" tab, and then select "Configure controller" as your configuration method. 3
